Day.43 : SFTP Adapter ✓ 31|08|2026

* created the flow Sftp Sender & Sftp Reciever ✓

* for SFTP Adapter there will be 3 Tab's

∴ General , Target , Processing ✓

* Now mainly We do have work in TargetTab only
Where will configure all the detail's for
connecting to the external System ✓

File Access parameter's :

⇒ field's are : Directory, filename, AppendTime
Stamp: ☐,

→ Connection parameter's

: Address, proxytype, Authentication,
credentialname , Timout,
Maximum Re connetion Attempts,
Automatic, Disconnectty Reconnect Delay, Automatic
Delay, Enable Support for
Deprecated Algorithm ✓

*NOW about processing Tab

⇒ processing parameter's:

Change Directories step wise: ☑ cha
create Directories: ☑
Flattern file name: ☑
Prevent Directory traversal: ☑
Use Fast Exist's check's: ☑

*** Handling for Existing File's : override
Append
fail
Ignore ✓

use Temporary file: ☐

* change directories: change diretory level's one at a time
* create Directories: creates missing diretory level's as provided in the file's path name
* flatten Filename: The file will be displayed with the path address where the is located
* Prevent Directory traverse: actual format: ../
Controlled by
if we give like '\..\' → ERROR
* Use Temperory file: Fail, ignore, override ✓

**x, Handling for Existing File's: If the file is Exist's
① Fail: Filesexist's → throw an error
② override: Replace the complete file with data
③ append: adding of new data to exist data
④ Ignore: it will Ignore the new data

Temp file
we can proces

* At append stage : when multiple process will by the worker Nodes at the same time.

It will give some Inconsistance

⇒ When we using the append we need to make sure one process should Run at a time ✓

* There won't be any problem when we use Append Time stamp [1] ✓

* NOW SFTP Sender Adapter

⇒ All the Scenario's are same as per the target

* Regex Expression → If we want to give any Regular Expressions for the file name, We we need % like; *; #; ?; etc

*.

⇒ file?.txt

↳ only '1' string will counted withe the file name

* NOW about processing Tab

⇒ Post processing Delete : Delete file
: Move file (Copy of
: keep file & Idem that occur file)

It will be triggered only when the Comple iflow Execution is Completed ✓

* Keep File and process again (usally we don't use but we will use for testing)

⇒ Post processing:

Sender SFTP	Reciever SFPP
Delete →	Process the file as per Reciever SFTP adapter and delete the file
Move File →	Proces the file ~~as~~ and move the file to direted folder
keep file proces again →	It will process and keep the file in input directory & and also put's the file in output diretory

Keep the file and mark as processed → ?

in idempotent Repository

Append ✓
Fail
ignore
Over ride
