Day 45: Installion & Configuration of Cloud Connector 02 | Sep | 2026

* cpy SFT/FTP → we can connect to the server Filesystem ✓
* rebex tiny SFTP server ✓
  - local → temperory → SFTP connection
  - Download the server ✓
* Ip addres, host, port, username and password ✓
* SSH → Secure Shell ✓
* Connectivity test? Select SSH and provide the all required details
  ⇒ It won't connect directly? So we need Install Cloud Connector ✓
  ∴ then
* On premise SFTP server is ready ✓
* NOW we need to install Cloud Connector Setup ✓
* Setup ✓ → Cloud Connector.

* Requirements to Setup the Cloud Connector

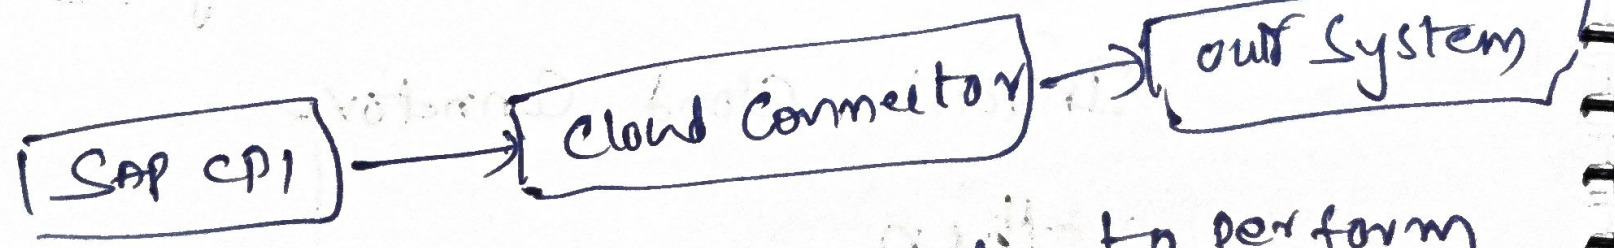

Configuration, Installation, and management will be done by the admin team

⇒ We are getting highlevel processing of Cloud Connector

* NOW about the example

For Example If we want to place any file from cpi (which is on cloud) we will follow some steps via cloud connector other wise it won't process

⇒ Scenario:- We want to place file from SAP CPI cloud platform to our system

This is the task we need to perform

∴ RebexTinySFTPServer → data → files → This is in our System

here we need to Place the file our task

* We cannot place the file directly?

Because that "data" folder is present in our local System (right), Now we already knew that the cloud platform Integration (CPI) does not connect to our System directly? ✓ Now what we will do

⇒ CPI ——SFTP/FTP——→ our System file System ("data") folder

if it want to access any folder, that it should be exposed to the SFTP server or FTP server ✓

* Now we need expose that Folder as SFTP Server

* Simple process → rebexTinySftpServer → Temperory SFTP Server for particular folder only

↓

open Source Softwar

* downloaded as .zip folder

* performed Connectivity test using SFTP ~~port~~ Host number

in monitor → Conkativity (for testing Whether it is Connecting or not?

↓

Obviously (no) ↺ CPI won't Connect

* Now we need to use cloud Connector (Sub account ~~Config~~)

Step ①: Install cloud Connector

follow all step's as per the trainer video and Complete the Installation of cloud connector ✓

* Step ① : Add Sub account

* Step ② : Configuration ✓ → System (SAP, Non SAP, Others)
→ ① Type of Protocol → TCP, RFC, HTTP (API)
(SFP, JMS queue, messages)
→ ② Host & port → function modules
↳ Host & port ✓
→ Enter the virtual Host ✓
Which can be used in CPI
Same host / Custom Host

Step ③ : Complete the Configuration in CPI website.

Step ④ :
