

Day 01 Introduction to SAP CP, 24 Aug 2026

* SAP → we need to call SAP (S - A - P) only

* SAP → System's Application's products

* SAP - 1972, head quarters - Germany

* Example used → Grocery Shop

'10' '2' members
needed to
run the store
in village
or a city

If we have more shops in
different cities

200 to 300

⇒ So from this Example we understood Employers
that there is chance of occurrence for example
of fraud from the through needed
out action's any where (Remember
this point) to run the
Business

* To overcome the above identified problem

Germany SAP company introduced the

Software called ERP (Enterprise Resource Planning)

It is a Single Software which
will run all Required Resources
in Single Platform.

* for SAP it has different modules

Functional

SAP MM

SAP FI CO

SAP SD

SAP HR

Technical

SAP ABAP

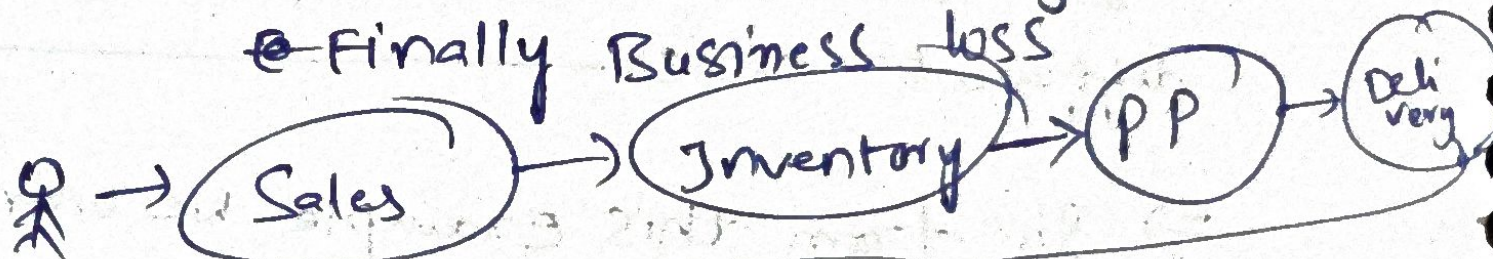

SAP CPI ✓

* How SAP is useful in Business perspective

Example: D-MART (Requirement is
Bying 10 Rice Bags)

⇒ Not available of 10 Rice Bags

⇒ Finally Business loss

Customer

"Total waiting time"

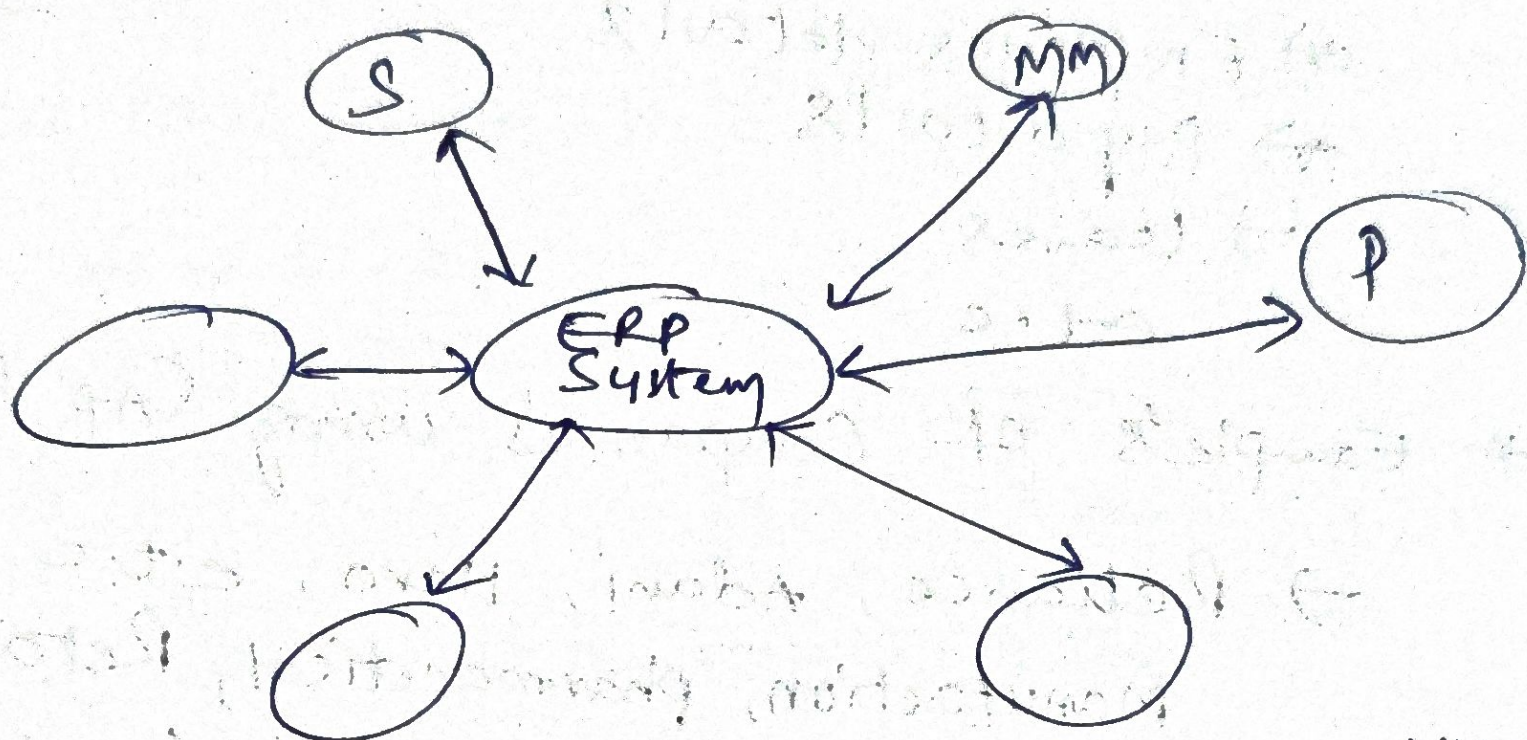

→ finally Business loss ✓

* To overcome this issue SAP Company Introduce

SAP ERP System.

Centralized System

* Centralized System

⇒ Here If the event happened like
 The availability of Rice Bags will show
 The morning is 100, Now by end of
 the day 95 bags sold out now.
 Due to that Centralized ERP System
 Each and every person knows the
 availability of Rice Bags 5 remaining

* Here the outcome is never will end with Empty

Stock

* SAP MM

(Material Management)

→ Raw materials

→ Stock availability

checking

SAP FI CO

→ Procurement
 finance

→ Profit

→ Loss

→ Investment

SAP SD

(Sales &
 Distribution)

→ orders

→ delivery

→ billing

SAP PP

(Production
 Planning)

→ When to

start
 preparing

et - C

SAP HR (Success factors)

→ Employees details

→ pay details

→ leaves

etc

* Example's of Companies using SAP services

→ Reliance, Adani, Hero, etc

Manufacturing, pharmaceutical, Retail and
marketing, gas companies (HP, Bharat
etc)

Business applications

* Now about CPI → Cloud Platform Integration

→ This is technical module

here we will do that data is

transferred the two or more systems

Example: Honda → manufacturing company.

Now here Honda company needs

tires to accomplish the outcome

So, Honda company will need

to get the tires from MRF

Company.

⇒ So the data transfer between these two companies by SAP

⇒ So the flow of data will be between

SAP ↔ SAP

SAP ↔ non SAP

~~SAP~~

* SAP CPI is a middle ware

* other middle ware Services are

⇒ Mulesoft by Sales force.

⇒ TIBCO

⇒ Dell Bhomi

* Why now SAP CPI is in Demand because

SAP own product and cloud service.

⇒ SAP is the market leader
