

Day 6

SAP CPI Components

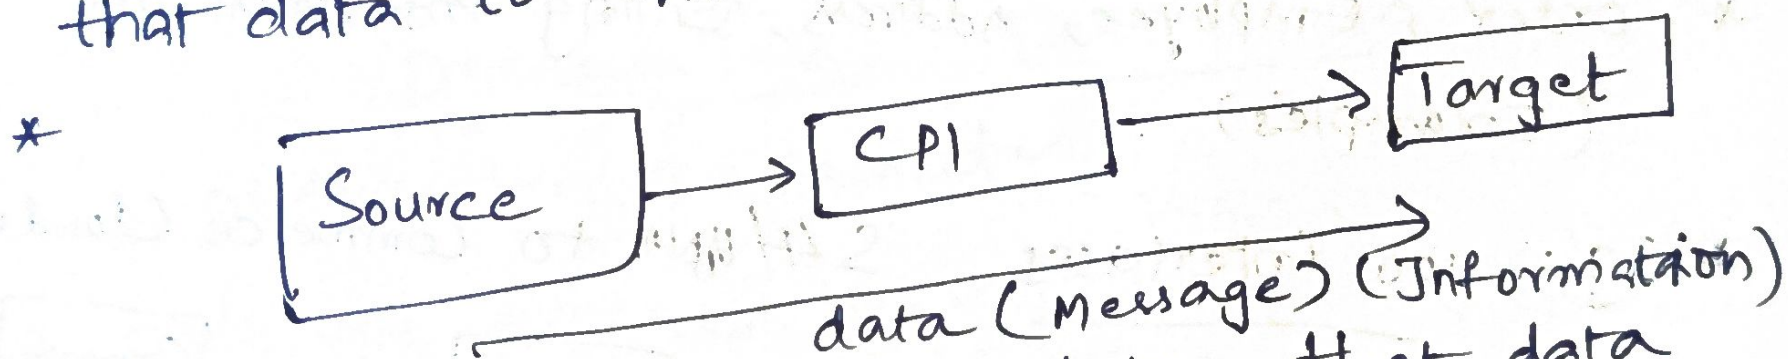

* CPI → middle system → which is helpful in integrating two systems

⇒ SAP to SAP | non SAP → SAP
SAP to nonSAP | non SAP → nonSAP

* let's say if we want to two systems

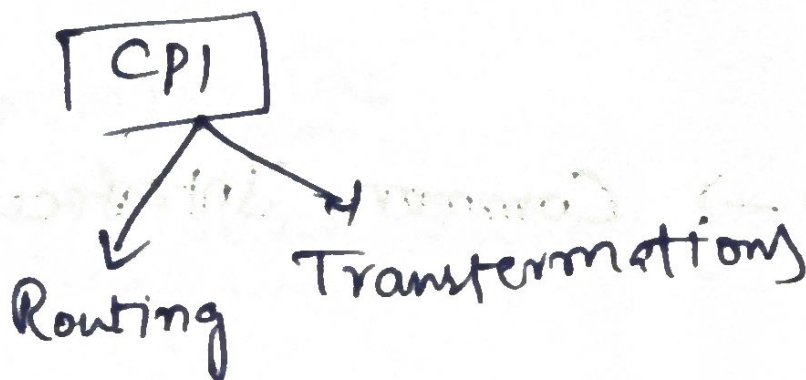

* CPI → Pick the data from Source and transfer that data to the Receiver System

* While transferring the data, that data should be secure

* Information as message (data) → message

* Source System, Transformation, Target System

* Routing → Routing the data to different Systems

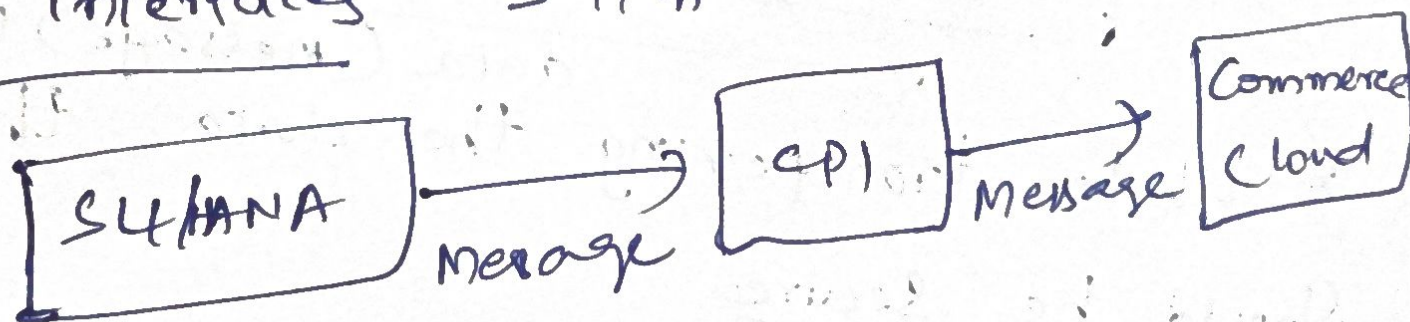

* Transformation → We will modify the exists data and transfer to the

Receiver System required format ✓

* Explained about Discover tab & created the flow with existing flows under product Tab ✓

* order, Employee, Address, Billing information (Examples)

* Eg: 100 interfaces S4/HANA to Commerce Cloud ✓

100 interfaces → Intsys → 1 Interface → 5 day
100 Interface → ?

* SAP → Common Interfaces

Today's

①
②
③
etc
all companies

} Predefined flows

* Brief overview of Standard Content ✓

↳ predefined tabs ✓

* custom flows → DesignTab

* one and only the tab we will use DesignTab

is only no where else in SAP CPI ✓

* PO System Explanation — 2 places

* About package → iflow's → step by step process
What we develop ✓

* we are responsible for creating the custom iflow's

* All the group of iflow's → package ✓

DiscoverTab, DesignTab

* Differentiation Explained ✓

* only one discover tab ✓ [example: google drive]

* If we want use any iflow that are exist
in DiscoverTab then we need to copy nothing
else we can do ✓ in DiscoverTab.

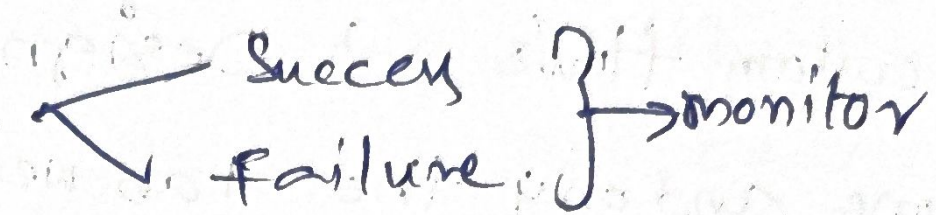

* Pre-Exist, post-Exist pallet function usage ✓

* Now about monitorTab

⇒ message → problem → Where you will check?

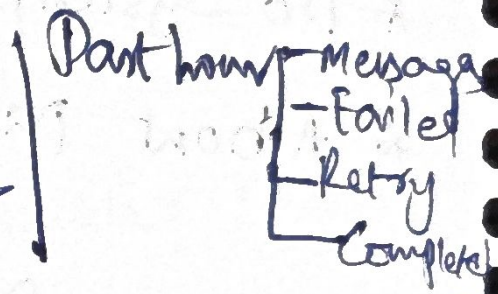

↓
failures

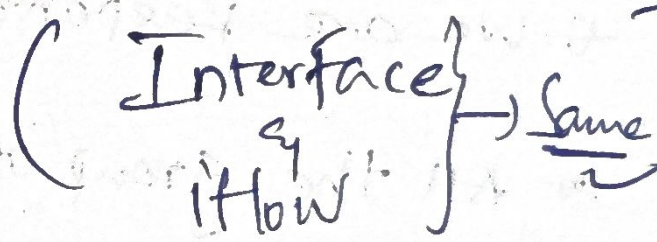

* Track for monitor tab → will be happened in monitor tab

* Status of message 

Eg: Email Sending Example

* monitor message processing ✓
about the status of messages ✓

* messages status overview Tab 

* Manage Integration Content Tab

→ CPI → Register → Activation link → After verification → P user ID

→ develop → deploy (Activate) → Interface

Activated ✓

∴ Interface (activate) → messages pressed

one system → another system ✓

* So → I Flow → deployed → monitor manage
Integration Content → started ✓

* Manage Security Tab ✓

~~to~~ Security material, Key store, PGP keys,
Access policies, JDBC material, User Ids, connectivity
test ✓

* Manage Store ✓

① Data stores, ② variables, ③ message queues,
④ Number Ranges ⑤ Partner directory ✓

* Access logs

System log files | Network logs
CPI → Messages → Issues → trace logs

* Manage locks ✓

Design time Artifact locks (eg: locked by username)

* Usage details Tab ✓

Change of usage details ✓

* Sub account → Usage Analytics ✓
