Name

Technical Name →

: Special characters
Not allowed ✓

Short Description

Version

Vendor

Mode : Editable ✓

* Overview: Summary

Description → overview of the flow.

* Artifacts: create, place objects → Add ↓
dropdown.

* Documents: Technical documents, functional
document,
Business documents, FSD → functional
Specification document

* FSD → Functional Specification Document → Business
Team

↓
* TSD → Technical Specification System

↓
* Flow ✓

* What is: Sender System, Target System,

(Both sides)

Adapter's, Authentication method ✓
format we need to send, format
we are getting from Source system

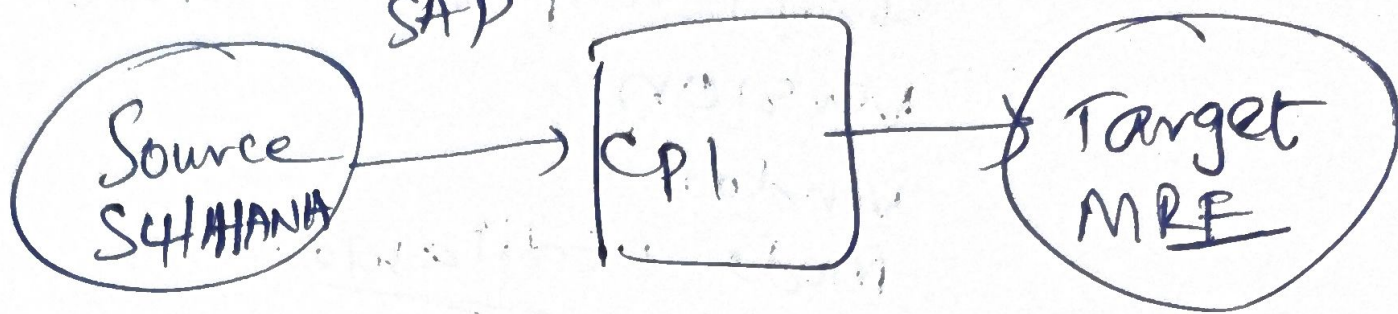

* Any transformation Required

SAP → non SAP MRF

Example:

Honda
SAP

Salesforce

We will transfer the data from source to Target (Sender to Receiver)

* Adapters → These are used to establish the connection between one system to another system

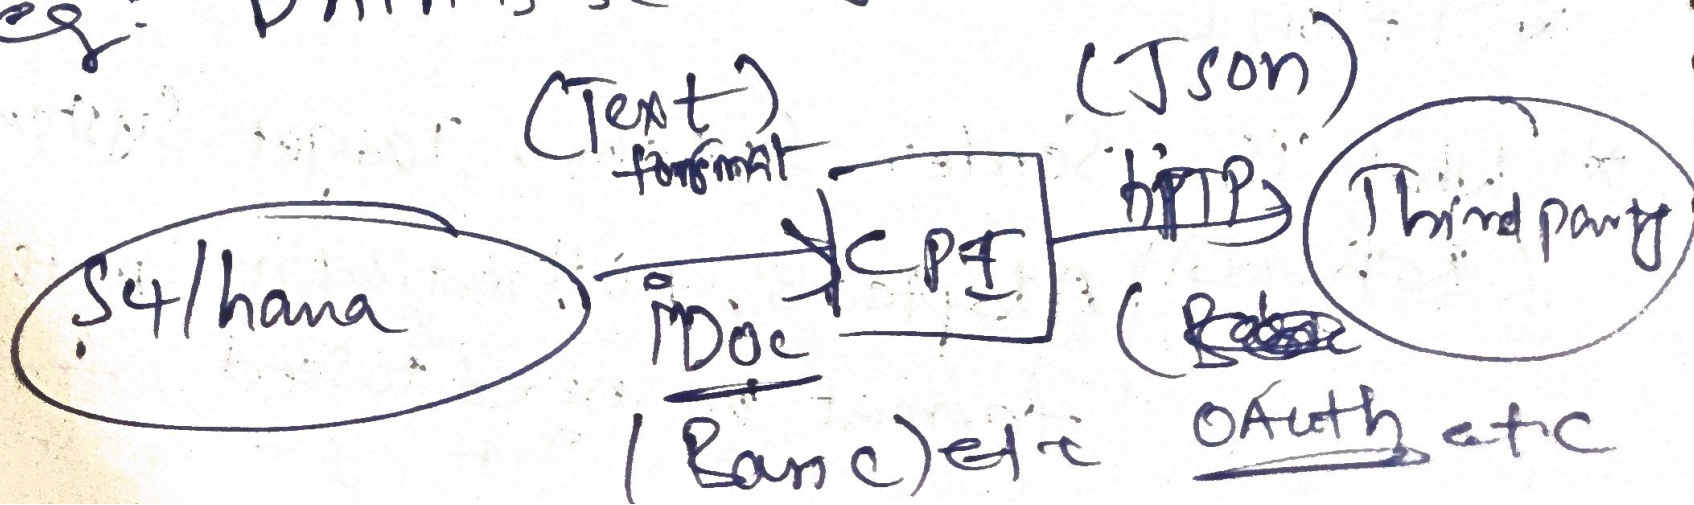

* Multiple Adapters:

eg: S4/hana ← IDoc, RFC, Proxy, ODATA
HTTP, SOAP

eg: Salesforce ← HTTP, ODATA, SOAP, SALESFORCE

eg: File ← FTP, SFTP

eg: DATABASE ← JDBC

* Authentication methods:

① Basic → { username
password }

② OAuth → token Based ✓

③ client certificate → certificate based
Authenticate

④ JWT → JSON token

⑤ Beaver → token → grant-type =
client (credentials)

* data formats: XML, JSON, CSV, TEXT ✓

* CPI → It will only support for "XML"
Format

* Transformation

eg: Satish (Text) → Kumar (JSON)
XML
Satish → Kumar
(mapping)
(Transformation)
