

Day 11

Content modifier 2

* What Content modifier will do? → It will add, modify, delete the data.

* options in Content modifier → General tab, message header, Exchange property, message Body

* message header → If we define any variable in message header → It will go to the target System as a variable header

* exchange property: That variable that is stored in the exchange property that will be used inside that flow only.

* message Body: This is the place where the message is sending to the target system. It is most powerful because → Whatever you do in the message Body part → that same data will be sent to the target System.

* yesterday we discussed about the Source type's in message header are

① Constant $\rightarrow$ hard coded value $\rightarrow$ output $\checkmark$
 $\rightarrow$ static value

② Expression $\rightarrow$ $\$ \{ \text{header.headervalue} \}$
 $\$ \{ \}$

* Today we will discuss about the property and "header" xpath Source types $\checkmark$

* xpath: It's a dynamic value

Source $\rightarrow$ Capture $\rightarrow$ use (xpath)

$\langle \text{order} \rangle$

$\langle \text{id} \rangle 123 \langle / \text{id} \rangle$

$\langle \text{status} \rangle \text{pending} \langle / \text{status} \rangle$

xpath for 'id' $\rightarrow$ ~~$\langle \text{order} \rangle$~~

$/ \text{order} / \text{id} \checkmark$

(or)

$// \text{id}$

'/' $\rightarrow$ Absolute xpath

'//' $\rightarrow$ Relative xpath

* xpath → datatype (java.lang.String)
↳ Capital

* here the point is if the variables are created in message header or exchange property using Constant and xpath (Source types) then how we will use in body?

Ans: We will use expression (which is a ^{Apache Camel} expression)
\$ { in.body }, \$ { header.headervalue }
\$ { property.property value }.

* demo → did in trail account

iflow name → Day_11_https_adapter_and_content_modifier ✓

* header variable created → Target header's ✓

property

variable created, value assigned → inside flow ✓

No Target System header's ✓

body → sends to the target system
