

Day 02 What is CPI & how it came 25/Aug/2026

* What is CPI

⇒ CPI - cloud Platform Integration
It is a middle ware tool

It will transfer the data between the system's

* SAP → System's, Application's & product's

* In SAP we have module's

⇒ functional module & Technical module

SAP FICO (Finance)

SAP ABAP (UI)

SAP MM (Material management)

SAP CPI

SAP SD (Sales & Distribution)

SAP BASIS

SAP HR (Human Resource)

SAP Security

Around there are 40 module's

SAP PI/PO

in Functional

⇒ SAP Basis → perform's the action's Related

to the System Administration

Access, Installation

⇒ SAP Security → Authorization, Support

Access

⇒ SAP PI/PO: middle ware tool on
promise it will Run

* SAP MM → ARIBA, CONCUR, FIORI, SF

* SAP BASIS → BTP Admin

* SAP Security → GRC

* SAP PI/PO → SAP BTP CPI / Integration Suite / CL

* Example: Manufacturing Company

⇒ For Accomplishing the the outcome for a bike, Honda Company needs Tires from other Company (MRF). So these two systems will contact each other.

Honda(SAP) → SD, FI, CO, PP, MM, --- MRF(Non-SAP)

Honda(SAP) → MRF(SAP)

Honda(non-SAP) → MRF(SAP)

Honda(non-SAP) → MRF(non-SAP)

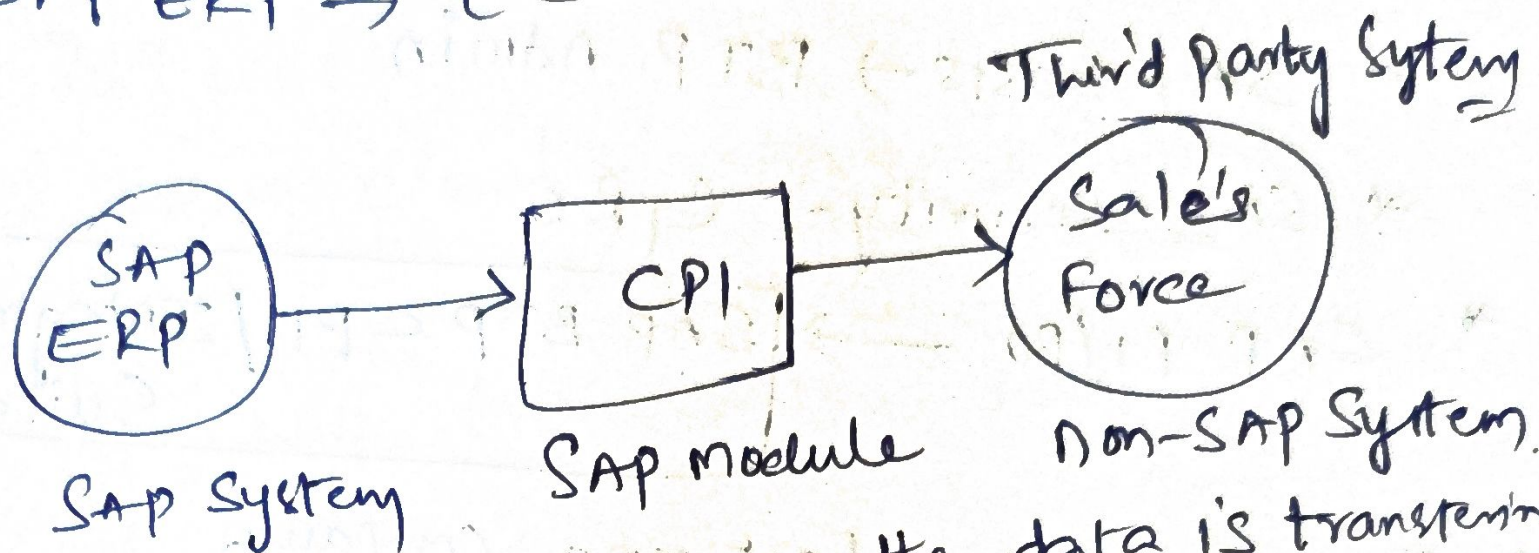

* SAP --- SAP NonSAP → SAP
SAP --- NonSAP NonSAP → NonSAP

* The whole data is stored in SAP ERP

* Why we are not sending the data directly to the other Systems Why we are using

SAP CPI

* SAP ERP → ECC → S4/hana → data base

* Here when we observe the data is transferring from one system to another system

Security risk's

⇒ CPI will **Read the data** from SAP ERP System and **only send** the Required data from **Third party System**

* ~~It~~ CPI transfer's data from one place to another place with out **storing data**

* Difference between **on premise & cloud**.

Eg. In phone gallery photo's → not able to Access. with out phone.

In cloud drive (Google photo's) → will able to access any where if you have access to your google account

* on premise

SAP MM

SAP PP

SAP SD

SAP ECC

SAP PI/PO (middleware)

cloud

SAP SF

SAP C4C

SAP CDC

SAP ARIBA

SAP CONCUR

SAP BTP & CPI → middleware

* Drawback

Why we moved to cloud from on premise.

Reason → Accessibility & Upgradation

* Eg: on premise

Travelling from Hyd to Bangalore

1. own car

2. High speed train

⇒ own car → buying car, investment, Fuel, Driver, Maintenance, Repair, travel cost
(on premise) Everything handled by customer

→ High Speed train: vendor will by train,
(cloud) only the travel cost affordable by customer

* SAP Stopping the Support from the year

2027

* SAP CPI started in the

year 2017
