Day 17

Timer event

* What is timer event : ? What we will use in mainflow → To Start the process (start message)

* Can we use start even → MIP (X)

→ Timer (Pallete) → Flow → we can start → without anyone Intervention → we can use it.

① Can we use timer in local integration Flow → Yes or No

Ans : NO

② Can we use it in exception Subprocess

Ans : NO

* Timer Start :

General, Scheduler

Basic

Frequency :

Advanced

Enter As : Simple Schedule ✓

: multiple Schedule ✓

Repeat : Seconds, minutes, hourly ✓

Daily, Weekly -- ✓

- - - ✓

: Schedule: on Deployment

* if we Select none → When we deploy the flow then automatically message processing will be Started

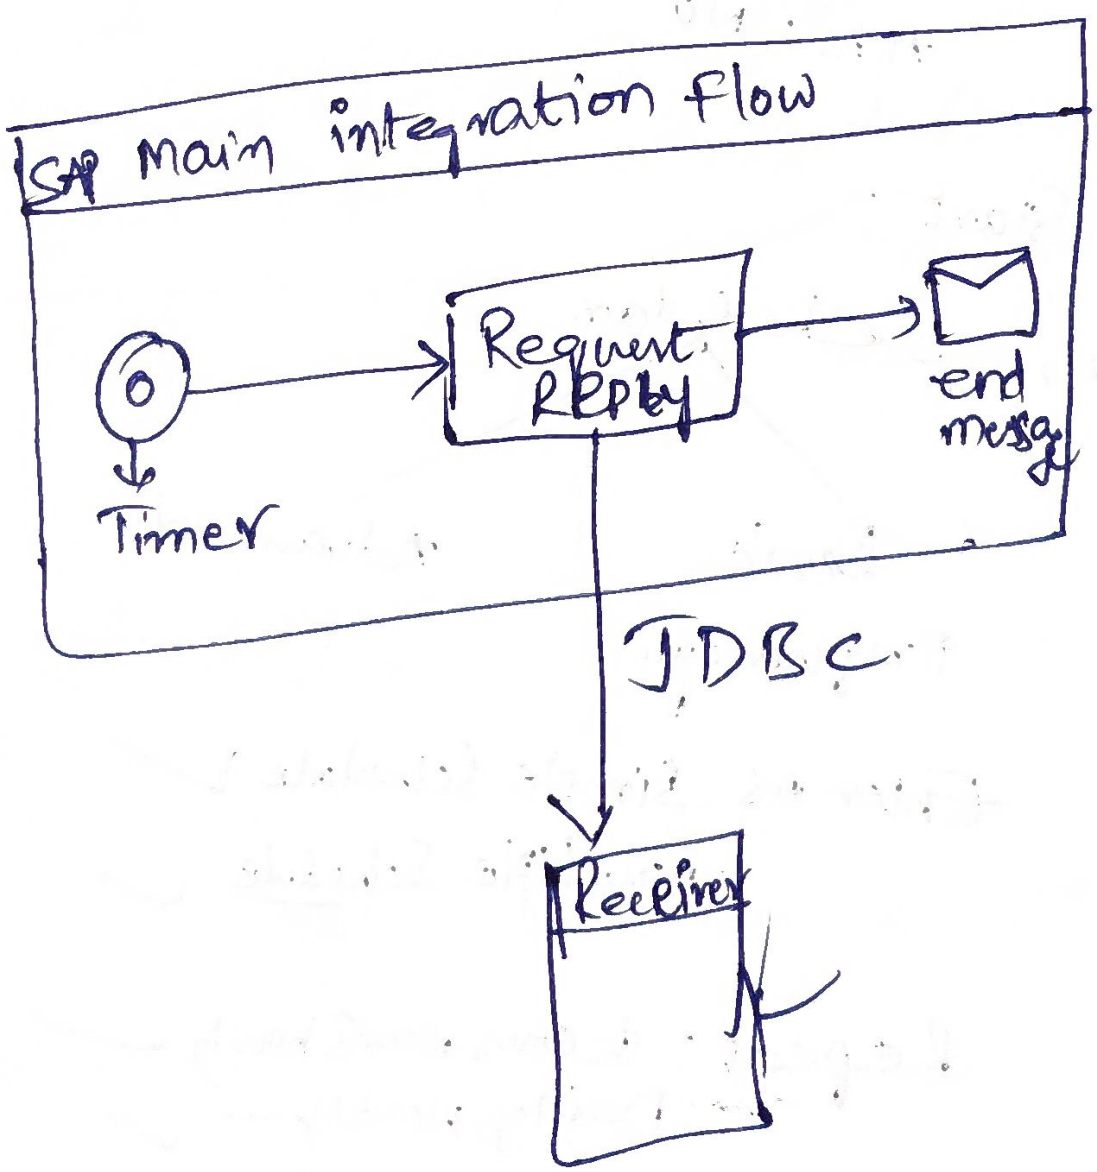

use cases: In Some Situations we want use Timer event in Realtime

those are ① Consider JDBC Adapter

↓

It will Connect to the data base

flow:

(2) if want to hit some external source and get the data by ourself then we can use Timer event.

* While using the Timer event we don't start the message instead we will Schedule the How when to start

* In how many ways we can Schedule the Timer? We can do it any ways what ever we want

* There won't be any endpoint after triggering the iflow in → monitor tab → integration content

↓

Why?

Ans: Because we have not configured any Sender Connection Adapter So it won't generate any end point in monitor tab
